

Meeting 6 Notes 3/21

Have UI for index page, login and sign up pages

Working on Function Calls

Team figured out how to create our database hook to work with our routes

Then assigned function calls and tasks for break

Madi - Make add workout page and form, link login and sign up pages to their respective routes

Wyatt - Implement the data reading on the index page using created data

Scott - make the get call for reading user info on the index page

Dominic - make the get call for reading the workout information based on the date for filling the schedule view, try to implement the method to persist the user's authentication across pages

Dan - research user authentication persistence, help with get calls and assigning tasks/items to team members, helping with other get calls that need implementing
